

T-11

T-11E

Five cavities perform "B" type conductor and insulation crimps. Conductor maximum crimp range is 22-12 AWG. Insulation maximum crimp range is 24-14 AWG. The T-11 uses the same five crimp cavities as the professional Delphi/Packard 12085271 tool, but is built on a less expensive, non-ratchet frame. (For an exact equivalent to the 12085271, use our T-16 pro crimper.) The T-11 is our most popular crimping tool.

The T-11E is a variation of our T-11, designed to reduce crimping fatigue with a compound leverage mechanism and longer handles. Very little effort is required to complete a crimp. With an overall length of about 9", the T-11E will easily fit into any toolbox.
